

# Faze Three Autofab Limited Environment Policy

---

We commit to protecting our environment and preserving our natural resources. We develop products taking into consideration their impact on the environment. Moreover, through effective management of our processes, we continually seek opportunities to minimize our impact on the environment.

Our ambition is to prevent or reduce environmental stresses to a minimum – even beyond statutory requirements.

Our commitments:

- Environmental protection is a long-term objective for which we are prepared to invest in today.
- Use natural resources sparingly in all areas, from product development to recycling.
- Realistically adhere to the principles of the waste-recycling economy. Avoiding waste as a priority before considering using recycling options. Waste disposal is considered only as a last resort option.
- Consistently promote environmental awareness to all employees.
- Systematically examine and reduce the environmental impact of our activities.
- Prevent or reduce pollution by using innovative technological solutions and minimize the impact on the environment.
- Inform our customers of the environmental impact of our products.
- Involve our suppliers and service providers in our environment protection activities.
- Lead a reasonable dialogue with the public and the authorities.
- Review our environmental policy regularly.
- Achieve continuous improvements in our environmental performance.
